                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    mammalian or yeast cell, transformed by the expression vector. Cells expressing TAB1 and TAK1 can be used too screen for TGF-beta signalling pathway inhibitors by contacting the cells with a test compound, and measuring the TAK1 kinase activity.

comprises: (a) contacting the polypeptide in the presence of a sample; and (b) detecting the amount of bound polypeptide, in which the sample; and (b) detecting the amount of bound polypeptide, in which the sample can be pre-mixed with TAKI or TAB1 polypeptide first. The transforming cyrowth factor (TGF) beta signal transmission inhibitors or indications e.g. as TGF-beta signal transmission inhibitors or activators, or activators, or mentally protein production enhancement activators, or monocyre migration inhibitors or activators, or immunosuppression inhibitors or activators, or activators of the TAKI polypeptide function, particularly kinase contivity. The present sequence encodes human TAB1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1458 CGTGTTGAGCCCTATGGGAGCTTTGCTGAGTTTTACCGCCTCTGGAGCGTGGACCATGGC 1517

inhibition of inflammatory cytokine signal transduction by contacting the sample with TAK1 and its receptor TAB1 and selecting for inhibition of TAK1/TAB1 binding. Also described is a method for screening compounds for inhibition of inflammatory cytokine signal transduction in which the inhibition of TAK1 phosphorylation is selected for; and drug compositions for the treatment of inflammatory disorders containing as active component an inflammatory cytokine signal transduction inhibitor. TAK1 is an essential component of the signalling process which results in release of inflammatory cytokines such as interleukin-1 (IL-1), tumour necrosis factor (TAK) and IL-6. The methods can be used for the selection of effective antiinflammatory agents. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1338 CAAAGCCCGACCTTAACCCTGCAGTCCACCAACACGCACACGCAGAGCAGCAGCTCCAGC 1397

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A method has been developed for screening for substances which inhibit Ct the binding of TAKI polypeptide to TABI polypeptide. The method comparises: (a) contacting the polypeptide in the presence of a sample; comparises: (a) contacting the polypeptide in the presence of a sample; can be pre-mixed with TAKI or TABI polypeptide, in which the sample can be pre-mixed with TAKI or TABI polypeptide first. The transforming comparison (TGF)-beta inhibitory substances can be used in drugs for indications e.g. as TGF-beta signal transmission inhibitors or activators, or extracellular matrix protein production enhancement inhibitors or activators, or cell proliferation prevention inhibitors or activators, or composyte migration inhibitors or activators, or physiological activity induction inhibitors or activators, or anyloid beta protein inhibitors or activators, or amyloid beta protein precipitation inhibitors or activators, or anyloid beta protein inhibitors of the TAKI polypeptide function, particularly kinase continuous protein sequence encodes human TABI.

                                                              15011
                                                                                                                                                                                                                                                                                                                                                         disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB1678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune (b) immune disorders e.g. Addison's disease, allergies, autoimmune is autoimmune thyroiditis, diabetes mellitus, Crohn's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 15191
                                                                                                 or research purposes. The prostate cancer antigens may be used to trea disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the preser
                                                                                                                                                                     AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB5363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; prostate cancer; prostate cancer antigen; detection; diagnosis; neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular; vulnerary; gastrointestinal; nephrotropic; antiinfective; gynaecological; antibacterial; gene therapy; neural; immune; reproductive; renal; gastrointestinal; pulmonary; cardiovascular; proliferative disorder; wound; infectious disease; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US-09-830-144-4_COPY_437_504 (1-68)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Escobedo J,
Lamson G, S
                                                                                                                                                with cytostatic activity. The polynucleotide is used to produce a polypeptide, to detect differentially expressed genes correlated with cancerous state of a mammalian cell and to inhibit tumour growth. The polynucleotide is used as a probe in mapping and tissue profiling. The encoded polypeptide and antibodies to the polypeptide can also be used for the polypeptide and diagnostic purposes. The polynucleotide is useful
                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid for producing a polypeptide, detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, and inhibiting tumor growth -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; cytostatic; gene expression;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (CI). (II) is useful for generating antibodies against it detecting or quantitating a polypeptide in tissue, as molecular weight markers and as care important (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical care involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations can be responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences AAS64197-AAS94544 represent novel human compositic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed construction, but was obtained in electronic format directly from WIPO at the product of the construction of the construct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁

Claim 11; SEQ ID NO 6219; 200pp; English.

XX

The invention describes a method of monitoring differential expression of genes in a first Bacillus cell relative to expression of the genes in cother Bacillus cells, comprising hybridising labelled nucleic acid probes isolated from Bacillus cells to a substrate containing array of Bacillus cells companing array, and determining array. The method is useful for measuring the expression of a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cells. The method is useful for monitoring genes in a first Bacillus cells. The method is useful for monitoring genes in a first Bacillus cells. The method is useful for monitoring genes, identifying possible functions of unknown open reading frames and monitoring gene copy number variation and stability. Monitoring changes in expression of genes may be used to provide a representation of the way in which Bacillus cells adapt to changes in culture conditions.

CC environmental stress or other physiological provocation. Extensive follow-up characterisation is unnecessary, when one spot on an array caulable. This sequence represents a genomic sequence information is available. This sequence represents a genomic sequence information is the method of the invention but was obtained in electronic format directly from WIPO at Europe. The sequence at a for this patent did not form part of the printed sequence genes of the private of the sequence of the se

Sequence 10, Application US/09529279

Patent No. 6451617

GENERAL INFORMATION

APPLICANT: OND, KOICHIRO

APPLICANT: OND, KOICHIRO

APPLICANT: TSUGHINA, MASATUKI

TTILE OF INVENTION: METHOD OF SCREENING TGF-BETA INHIBITORY SUBSTANCES

FILE REFERENCE: 053466/0278

CURRENT PELLING DATE: 2000-04-11

PRIOR APPLICATION NUMBER: US-020

PRIOR PUBLING DATE: 1997-10-22

PRIOR PELING DATE: 1997-10-22

TYPE: DNA

SOFTWARE: PALENTING OFFE: 2.1

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description

polylinker; Site 1: Not 1; Site 2: Eco R1; The UNL-P-RN
library is a normalized library representing porcine
ovarian follicles, ranging between 2.0 to 10.0 mm in
diameter, collected during 7 days of the follicular phase
of the pig estrous cycle. This library was derived from
the library UNL-P-E2. The tag is a string of 5-6
nucleotides present between the Not I site and the
oligo-dT track. The library was constructed as described
by Bonaldo, Lennon and Soares, Genome Research 6: 791-806
, 1996.

polylinker; Site_1: Not I; Site_2: Eco RI; The UNL-P-FN
library is a normalized library representing porcine
ovarian follicles, ranging between 2.0 to 10.0 mm in
diameter, collected during 7 days of the follicular phase
of the pig estrous cycle. This library was derived from
the library UNL-P-F2. The tag is a string of 5-6
nucleotides present between the Not I site and the
oligo-dT track. The library was constructed as described
by Bonaldo, Lennon and Soares, Genome Research 6: 791-806

/polylinker; Site-1: Not I; Site-2: Eco RI; The UNL-P-FN
library is a normalized library representing portine
ovarian follicles, ranging between 2.0 to 10 0 mm in
diameter, collected dutring 7 days of the follicular phase
of the pig estrous cycle. This library was derived from
the library UNL-P-72. The tag a string of 5-6
nucleotides present between the Not I site and the
oligo-dT track. The library was constructed as described
by Bonaldo, Lennon and Soares, Genome Research 6: 791-806
, 1996.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       EST 10-JUL-2001

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description
